

TEN WAYS TO ADD BIODIVERSITY TO YOUR GARDEN

When most gardeners think of a biodiverse garden, their thoughts tend toward a garden teeming with birds, butterflies, beneficial insects and other wildlife. This talk discusses several ways you can increase wildlife in your garden and thereby increase its biodiversity. There are ideas included on how to add to the genetic diversity of the plants in your garden. By creating a biodiverse garden, you are adding to its beauty as well as helping to heal the planet and to preserve it for future generations.

Presented by Carol Gravens, a St. Louis Advanced Level Master Gardener. Carol gives talks and classes on orchids to various groups in the community and at Missouri Botanical Garden as part of the Master Gardener Speakers' Bureau, as well as, other classes on a variety of topics related to plants.
